## Deprivation Explainer<sup>6</sup>

The 2016 Pobal HP Deprivation Index (Haase and Pratschke, 2016)

The index provides a method of measuring the relative affluence or disadvantage of a particular geographical area using data compiled from various censuses. A score is given to the area based on a national average of zero and ranging from approximately -40 (being the most disadvantaged) to +40 (being the most affluent). In addition to this, percentage data for the area is given under the following categories:

- Population Change
- Age Dependency Ratio
- Single Parent Ratio
- Primary Education Only
- Third Level Education
- Unemployment Rate (male and female)
- Proportion living in Local Authority Rented Housing

The relative index scoring and the above percentage data focuses particularly on the previous three censuses, enabling easy comparison of data between 2006, 2011 and 2016. This index is of particular significance given the economic changes that have occurred nationally during this period. The change in the index scoring and in each measured category is also calculated, meaning that the increase or decrease on a national, regional and local level can be easily viewed.

## Small Area Population Statistics:

The Small Area Population Statistics (SAPS) of the 2016 Census of Population has been released at the level of 18,488 Small Areas (SAs). SAs are standardised in size, with a minimum of 50 households and a mean of just under 100, thus effectively providing street-level information on the Irish population.
